Climate Change:

Already in a Neighborhood Near You

Presented by Dr. Sara Via, Professor and Climate Extension Specialist, University of Maryland

Although the effects of climate change can already be seen in our communities, many are uncertain about why the climate is changing or whether they should be concerned. How do we know that climate change is real and the result of human activities? Dr. Via will answer these questions and discuss the major impacts of climate change on weather, food and water security, biodiversity and health. Then she will consider the solutions, all of which are already available. Finally, she will discuss current thinking from economists that it is now cheaper to solve the problem than to pay for relief from the mounting number of climate-related disasters.

Audubon's Bird-Friendly Baltimore

Presented by Susie Creamer, Director of Urban Education & Conservation, Patterson Park Audubon Center, Baltimore, MD

Patterson Park Audubon Center is a leader in improving Baltimore for birds and people. Explore Audubon's unique success stories of local wildlife gardens, creative spaces in all shapes and sizes! Learn why Baltimore's Audubon Center has become a national model for multicultural bird conservation in the urban context. The presentation includes an introduction to gardening for birds and beneficial insects using Maryland native plants. Together, we can improve the landscape for our avian friends. Even in containers, you can create a bird-friendly garden worthy of Audubon recognition!

The Humane Gardener: Nurturing Habitat for Wildlife

**Presented by Nancy Lawson, Author, Speaker,
& Garden Habitat Consultant**

Why do we call some insects "beneficial" while others are "pests"? Why are some plants considered "desirable" while others are "weeds"? In this myth-busting talk, learn how common growing methods divide the natural world into false dichotomies and perpetuate misperceptions about the wild species living among us.

Understanding Wetlands: One of the Most Productive Ecosystems in the World

**Presented by Suzanne Pittenger-Slear, President &
CEO, Environmental Concern Inc., St. Michaels, MD**

Once perceived as worthless, we now know how vital wetlands are to water quality, erosion control, and native species diversity. This presentation will help you understand how wetlands function, why wetlands are beneficial habitats for native species, and what you can do to protect and enhance wetlands in your community. A show and tell will include several species of wetland plants and a few small creatures that live in wetland habitats.

Managing Stormwater on Your Property

Presented by Diane Miller, PLA, PWS, Restoration Ecologist, Landscape Architect, Environmental Concern Inc., St. Michaels, MD

Stormwater pollution is the #1 source of water pollution in the United States. Rain gardens are just one example of a Stormwater Best Management Practice (BMPs) that utilizes plants to filter nutrients and sediments from water that flows into local waterways. This presentation will give you the confidence and resources to create a garden in your backyard that will collect the stormwater that runs off your roof, pathways and driveway.

Conservation & Environmental Awareness Day

Tuesday, October 23, 2018

Vollmer Center at Cylburn Arboretum

4915 Greenspring Ave., Baltimore, MD 21209

~~~~~

## Make everyday earth day

~~~~~

Presented by

Federated Garden Clubs of Maryland, Inc.

Conservation & Environmental

Awareness Committee

Linda Harris & Lynn Walter

Committee Co-Chairs

Hosted by

Federated Garden Clubs of Maryland, Inc.

President, Diana Bonner

Participating Conservation & Environmental Organizations

These organizations will have an exhibit with information about their activities and mission, along with staff members who will be available to talk to those attending.

Patterson Park Audubon Center
Environmental Concern Inc.
Maryland Native Plant Society
Chesapeake Conservation Corps
The Nature Conservancy
Maryland Dept of Natural Resources –
Wildlife & Heritage Service

Vendors

Linda's Leaves (Linda Jacobson);
Leaf castings in concrete, butterfly puddlers

Down to Earth Pottery (Elaine Ozol);
Pottery inspired by nature

Partnership Crafts (Joan Betzold)
Hand-made, unique baskets using traditional weaving techniques; basket weaving demonstrations

Animal Faïre (Gayle Mathues)
Unique, hand-made needle felted animals

Sandy's Creations (Sandy Freyer); Hand-painted,
nature inspired drawings on wood and slate; bird prints

DoTERRA Essential Oils (Danette Wolford)

Willow Oak Flower & Herb Farm (Severn, MD)
“Our farm is not only a nursery but also a preserve for our ecosystem” (pesticide & herbicide free farm)
Their own dried flowers, herbal teas, seasonings, hand-made wreaths, swags, tussie mussies, herbal bath & body products, lotions, salves & soaps

Everyone is invited to share in our special educational day – garden club members, master gardeners, master naturalists as well as anyone from the community.

Schedule
